EDUCATION

BS Electrical Engineering (ML specialization), UCSD | 2022 - 2026 (Finishing a quarter early) | San Diego, CA
GPA: 3.72/4.00; **SAT:** Math 760, Verbal 640; **SAT Math II:** 780

AWARDS & HONORS

- **Best All-Rounder Award** (Top student across academics, sports, service & creativity), High School
- **Ranked 2nd** in graduating class; 8 A*s and 1 A in IGCSE
- **Best Navigator Award**, Singapore Armed Forces (for terrain analysis, route planning & navigation)
- **Vice-Captain**, Singapore U16 & U19 National Cricket Team (international tournaments)

PROFESSIONAL EXPERIENCE

Strategy Consultant Intern, Monitor Deloitte | Jun 2025 - Sep 2025 | Singapore

- Designed quantitative scoring framework to rank 500+ pharmaceutical laboratories across 8 criteria (regulatory compliance, technical capability, ownership structure, certifications) - systematically filtered to 14 high-potential partners using multi-criteria decision analysis
- Constructed structured database from fragmented regulatory and public sources, cleaning and consolidating data on laboratory capabilities, compliance status, and certifications to enable data-driven partner selection

Technology Consultant Intern, Ernst & Young | Jun 2024 - Sep 2024 | Singapore

- Performed risk assessment of Port Singapore Authority's IT infrastructure, modeling failure scenarios and calculating expected loss metrics across critical systems to prioritize cybersecurity investments
- Analyzed control frameworks across multiple enterprise systems, producing risk-ranked recommendations with quantified probability and impact estimates for executive decision-making

National Serviceman, Singapore Armed Forces | Jul 2020 - May 2022 | Singapore

- Led 30-person platoon in high-pressure operations requiring real-time optimization of resource allocation, route planning, and tactical decision-making under uncertainty and time constraints

QUANT PROJECTS

Cryptocurrency Cross-Sectional Momentum: Rigorous Out-of-Sample (OOS) Analysis:

- Evaluated momentum and reversal strategies across 25 cryptocurrencies using train/validation/OOS methodology; momentum had statistically significant alpha in training ($t\text{-stat} = 2.02^{**}$, $p < 0.05$) but failed validation/OOS, proving strategy was regime-dependent not persistent
- Discovered reversal generated highly significant OOS alpha (73% annual, $t = 4.64^{***}$) but was completely unimplementable - 138% daily turnover created 101% cost drag, proving statistical significance $\neq$ profitability
- Identified 38% cross-sectional dispersion collapse post-2022 as root cause of momentum failure; expanded universe from 9 to 25 coins; implemented proper execution timing and cost modeling

OpsPilot - Transaction Reconciliation & Anomaly Detection System

- Built an automated system using statistical anomaly detection and FastAPI to identify ledger mismatches and missing entries in real-time.

QUANT SKILLS: Python (Pandas/NumPy), SQL, Regression Analysis, Time Series Analysis, Statistical Modelling, Backtesting, Machine Learning, C++, MATLAB

INTERESTS: Poker, Running, Soccer, Creative Writing, Cooking, Reading, President of UCSD cricket club

LANGUAGES: English, Hindi
